

Organic chemistry practice

Name _____

Draw one skeletal (line-angle) structure in the space under each question. Write heteroatoms such as O, OH and Br as letters.

1. Draw the structure of 2-butanol.

2. Draw the structure of acetic acid (ethanoic acid).

3. Draw the structure of toluene (methylbenzene).

4. Cyclohexanol is oxidised with PCC. Draw the product.

5. 1-Butanol is oxidised with PCC. Draw the product.

PCC stops at the first oxidation.

6. 2-Methyl-2-butene reacts with HBr. Draw the major product.

Think about which carbon the bromine ends up on.
